Abstract of **EP1102097**

A hybrid connector consists of an optical fiber cable having a ferrule attached at one end thereof, an optical adapter having a receiving cavity for the one end of the optical fiber cable, an electrical connector having terminal receiving cavities for receiving electrical terminals and an optical adapter mount section for receiving the optical adapter, a cover which receives the optical adapter, and an optical housing having a housing side receiving cavity for the one end of the optical fiber cable. The hybrid connector, depending on the constituent elements selected, can be provided as an optical/electrical connector, a first optical connector and a second optical connector, so as to match to the mating connector.
